Tailored on the professional players' requirements, World Champion 2.0 is the most updated version of a competition model which, since already a longtime, is a classic in the world tournament panorama.

30 mm thick cabinet walls made from layers of plywood and medium density fibreboard combined together to provide the sturdiest and at the same time most flexible construction possible. Color: white with ITSF logo and official Competition plate with series number.

MDF playfield support board, for an increased cabinet stress resistance, reinforced by metal bars for the maximum compactness and stability during the competitions.

Adjustable supports inside the cabinet allow to obtain a perfectly levelled playfield.

The cabinet can be opened to reach the inside. When the upper cabinet is lifted, a metal support bracket automatically activates to prevent the falling of the same. (fig. 1)

10 x 10cm square metal legs coated with anti-scratch silver painting. Competition leg levellers for a perfectly flat playfield on all surfaces.

Diameter 16mm high resistance, steel bars treated with anti-rust chromium plating. The increased 3mm thickness allows 50 % more torsion resistance: bars keep a perfect shape after a prolonged use.

19 mm long rubber bumpers instead of springs, with new material for a better shock absorption.

Distancing rubber on the goalkeeper bar maintaining the player within the goal range of action.

The steel roller bearings inside the bearings fixing bars to the cabinet greatly improve the game speed, while reducing the stress for the players' wrists.

Red and blue players in unbreakable plastic material directly moulded onto the bars. The goalkeeper is able to fully rotate (360 degrees). (fig.2)

Handles in plastic material to with wood inserts for a better grip. (fig.3)

Playing field in non-reflective tempered sanded glass. The silk-screen printed white lines on a green background reproduce the football ground.

Playfield corners sloping down perfectly towards the playfield without creating any step.

Goals in HDP (high density polymer) reinforced with fibreglass and innovating profile moulded to prevent irregular ball trajectories.

Balancing inside goal to absorb the ball bumps and preventing bouncing off.

Competition abacus score counters enabling to mark game sets and goals. Spirit level on both score counter panels. (fig.4)

Standard mechanical coin mechanism. On request electronic coin mechanism.

10 standard white balls and 3 competition balls Speed Control Plus supplied.
